
EMV and Internet

Posted by Editor - 2006/05/08 19:24

As far as I know, EMV was designed to authenticate card and terminal in POS/ATM transactions.

Is EMV technically suitable for Internet transactions, assumed that consumers own a smart card reader?

Is there any available solution that uses EMV authentication for Internet payments?

What is the level of integration between EMV protocols and current browser-based products?

Thanks a lot!
